

Electronic Data Interchange

Moving data from system to system always presents a challenge. You have dissimilar business systems, different part numbers, different UPCs, and different units of measure – all of which are problems that you do not have time to deal with. Savance has years of experience working with different business systems – new and old – to take this problem off your hands. Let Savance generate a custom EDI solution tailor-fit to your needs – yet charge you only a fraction of the cost.

Tailored to Fit Your Needs

We start by assessing your current system and help you define your immediate requirements. We then put together a plan of attack on implementing EDI – typically starting with sending purchase orders, then soon following with accepting orders and sending invoices. Using this plan, our EDI team will work on integrating the necessary changes to implement the plan.

Implementation Methods

Typically there are three options to implement EDI – each dependent upon your current system. The first, and usually the quickest, is if your system has built-in capabilities to implement EDI. For many systems, this is not an option, so the next two options must be considered depending upon the availability of source code for your current business system. With the source code, Savance can often customize certain programs of your business system to provide a truly seamless integration – as good, if not better, than the business system having it built in originally. When source code is not available, we must leverage the print or e-mail option already built into the system to intercept outgoing purchase orders and invoices to transmit them electronically. Then to accept and process EDI transactions, we reverse engineer how information is stored in your system and mimic that process.

Common EDI Formats Implemented

EDI Number	Type
810	Invoice
812	Credit/Debit Adjustment
850, 855	Purchase Order, PO Acknowledgement
860, 865	Purchase Order Change, PO Change Acknowledgement
856	Advanced Shipment Notice / Manifest
